

NAGADITYA SHANMUKH

CYBERSECURITY STUDENT | ASPIRING PENETRATION TESTER

B.Tech — CSE (Cybersecurity)
CVR College of Engineering
Seeking cybersecurity / VAPT internship opportunities

LinkedIn profile • Email

PROFILE

I am a cybersecurity student building practical skills through authorized lab work, structured training and technical documentation. My work focuses on network reconnaissance, service enumeration, web application security testing, vulnerability assessment and OSINT. I aim to contribute responsibly to a security team while continuing to develop as a penetration tester.

SECURITY MINDSET

> *“The best way to defend a system is to understand how it can be attacked — ethically, carefully, and with purpose.”*

LEARN • TEST • DOCUMENT • IMPROVE

CORE TOOLKIT

Nmap • OWASP ZAP • Kali Linux • Metasploit Framework

OSINT & WHOIS • DNS reconnaissance • Network enumeration • Web security testing

OWASP Top 10 • Oracle VirtualBox • Python basics • Technical reporting

SELECTED SECURITY PROJECTS

01 | NMAP-BASED NETWORK VULNERABILITY ASSESSMENT

Kali Linux • Nmap • Metasploitable 2 • Metasploit • Oracle VirtualBox

Performed host discovery, TCP SYN scanning, service/version detection, OS fingerprinting and Nmap NSE checks in an authorized virtual lab. Documented seven security findings, including investigation of CVE-2011-2523, anonymous FTP access, weak SSH credentials and exposed legacy services. Deliverable: 24-page technical report with 19 evidence screenshots and remediation guidance.

Open project report ■

02 | WEB APPLICATION VAPT USING OWASP ZAP

OWASP ZAP • Kali Linux • Testfire.net practice application

Conducted a full-scan web security assessment and reviewed 16 scanner alerts across six OWASP Top 10 (2017) categories. Investigated Blind SQL Injection, XSS and Directory Traversal alerts; assessed clickjacking protection, password autocomplete, HTTP headers and TLS. Deliverable: 21-page technical report with evidence and recommendations.

Open project report ■

03 | OSINT & WHOIS RECONNAISSANCE

OSINT • WHOIS • DNS • IP intelligence

Practised DNS and IP resolution, server reachability checks, HTTP/HTTPS port checks, reverse IP and WHOIS lookups, IP history analysis, subdomain discovery and infrastructure reconnaissance. Produced a detailed project report.

Open project report ■

04 | NETWORK SERVICE ENUMERATION

Networking • Ports • Service identification

Documented commonly encountered services and ports including FTP (21), HTTP (80), SMTP (25), MySQL and IRC. Connected service identification with the enumeration phase of a security assessment.

Open project report ■

05 | SUNSET VAPT — FTP & SYSTEM SECURITY REVIEW

Nmap • FTP • John the Ripper • Kali Linux

Assessed the lab target 192.168.29.214. Identified anonymous FTP access, exposure of a sensitive backup file containing password hashes, and a weak password hash recovered through offline dictionary analysis. Assessment report dated 5 August 2026; remediation recommendations include disabling anonymous FTP, protecting sensitive files and enforcing stronger password policies.

CERTIFICATIONS & TRAINING

Cybersecurity Professional Program — SkillLogic · 6 July–23 September 2026

SkillLogic Phase 2 Completion — Module completion confirmation · 1 October 2026

Data Structures: Deep Dive Using C — E-Box / CVR · April–June 2026

Python Basics for Beginners — E-Box / CVR · April–June 2026

AI Tools & ChatGPT Workshop — be10x · Issued 21 June 2026

PROJECT EVIDENCE & PROFESSIONAL ACTIVITY

LinkedIn updates document network service enumeration, Nmap network VAPT, OWASP ZAP web application VAPT, and OSINT / WHOIS reconnaissance. Full technical reports and supporting evidence are included in the website project package.

EDUCATION & CAREER OBJECTIVE

B.Tech, Computer Science & Engineering (Cybersecurity)
CVR College of Engineering

Seeking an internship in penetration testing, vulnerability assessment, application security or security operations where I can apply foundational skills, learn from experienced practitioners and contribute to authorized security testing.

> *“Security is a process, not a finish line. Every scan, finding and lesson makes the next system stronger.”*

All testing described in this portfolio was conducted in authorized educational or practice environments. Automated scanner alerts are not represented as confirmed exploitable vulnerabilities unless independently validated.
